

The new Radia R-200 by BG is the most affordable model in the Radia Architectural Series. An updated version of a classic, this in-wall dynamo can fit almost anywhere while easily filling your listening space with amazing sound.

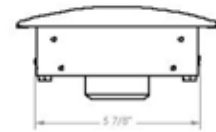

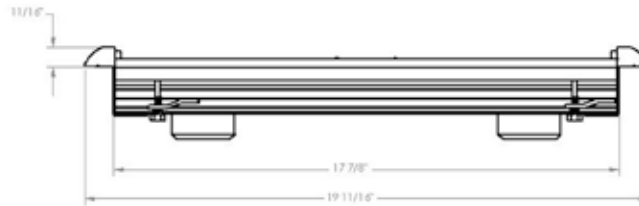

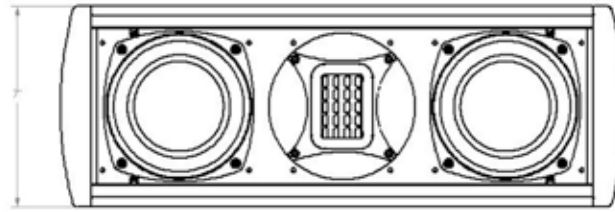

Driving the R-200 are two 5.25" long-throw woofers featuring the latest neodymium magnet technology along with our patented Neo3 tweeter. This seamless two-way system takes advantage of conventional loudspeaker design, as well as our proprietary planar technology, offering the best of both worlds. The result? Stunning sound in a compact form that can be easily mounted in an opening less than 20" long, 6" wide and 4" deep.

As with all Radia loudspeakers, the R-200 is hand crafted from the finest materials, such as high-grade steel and aluminum. The speaker's rugged, precision frame reduces wall resonance, making it an excellent choice for professional installations, where there is zero tolerance for error and maximum demand for high fidelity. In addition, the R-200 is paintable allowing your customers to match the speaker's finish to their decor.

Compact yet powerful, the R-200 delivers a deep, spacious soundstage with lifelike imaging and uncanny accuracy for a wide array of locations and applications around the home.

- › **Rugged** Highest quality components will provide a lifetime of trouble-free enjoyment
- › **Versatile** Perfectly suited for home theater front or surround, audio or multi-room audio
- › **Stylish** Attractive industrial design with paintable grille and frame to match any decor
- › **Lifelike** Horizontal dispersion creates expanded soundstage and wider "sweet spot"
- › **Accurate** Planar ribbon drivers provide superior clarity, resolution and fidelity of sound
